

Factsheet

December 2024

SAMCO
MUTUAL FUND

*Cutting-edge Systems
For Wealth Creation*

How to Read Factsheet

Fund Manager: An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He/She is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription: This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount: This is the minimum investment amount for an existing investor in a mutual fund scheme.

SIP: Systematic Investment Plan (SIP) works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for a SIP that invests ₹500 on every 15th of a month in an equity fund for a period of three years.

NAV: The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which an investor enters or exits the mutual fund.

Benchmark: A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds. Some typical benchmarks include the NIFTY, Sensex, BSE200, NSE500, Crisil Liquid Fund Index and 10-Year Gsec.

Entry Load: A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged when an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹100 and the entry load is 1%, the investor will enter the fund at ₹101.

Note: SEBI, vide para 10.4 of SEBI Master circular No. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90 dated June 27, 2024 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

Exit Load: Exit load is charged when an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceeds at net value of NAV less Exit Load. For instance, if the NAV is ₹100 and the exit load is 1%, the investor will receive ₹99 per unit.

Modified Duration: Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Average Maturity: The average time of maturity of all the debt securities held in a portfolio. It states the weighted average maturity of the assets in the portfolio.

Yield to Maturity (YTM): The Yield to Maturity or the YTM is the rate of return anticipated on a bond is held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

Standard Deviation: Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Macaulay duration: The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price

Sharpe Ratio: The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta Ratio (Portfolio Beta): Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM: AUM or assets under management refers to the recent/ updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings: The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme: The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is termed an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile: Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Total Expense Ratio: Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

Portfolio Turnover Ratio: Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

About Strategy

HexaShield Tested Investment

Samco's HexaShield Tested Investment is a strategy to put to work money with businesses that can endure and survive in a variety of stressful situations and generate superior long-term risk adjusted returns. It relies on understanding the resilience of companies based on Samco's HexaShield framework tests and evaluates every company and institution on 6 most important facets of risks and stress. These tests are meant to measure every company's ability to maintain enough buffer to stay afloat under adverse economic scenarios. The HexaShield tests are also designed to understand if these companies can generate high cash returns on capital employed in a variety of economic conditions including degrowth, recession, etc. This rigorous scientific and statistical process helps get an understanding of risks, reduces room for bias and beliefs, inculcates discipline and enhances the probability of success.

3E Investment Strategy

1. Buy only **Efficient HexaShield Tested Companies**
2. Buy at an **Efficient Price**
3. Maintain an **Efficient Turnover**

Momentum Strategy

Momentum refers to the tendency of winning stocks to continue to perform well and losing stocks to perform poorly in the near future. In Samco Active Momentum Fund the stocks are also selected based on their performance in the past with the idea that they will continue to outperform. The investors are attracted to a company whose price is on an upward trajectory thus opening a new way of buying at high and selling at higher, instead of the traditional idea of buying at low and selling at high, generating higher returns. A mix of methodologies to compute momentum are used which include but are not limited to Risk-adjusted Price Momentum, Momentum Strength Score & Momentum ratio. The fund makes trades based on trading signals generated by the intelligent algorithm. This algorithm has been developed by studying years of market data including price, volume, volatility, open interest, breakouts, relative strengths and correlations with appropriate weights on various data points.

Transformer Strategy

The principal asset allocation of Samco Dynamic Asset Allocation Fund shall be determined based on momentum in equity markets and extreme mean reversion signals which shall be calculated using SAMCO's proprietary TRANSFORMER model. Fundamentally the strategy will operate based on trend following strategies i.e., when markets are in clear uptrends with lower volatility, equity allocations shall be higher and when markets are breaking down, in correction or bear market phases, net equity allocations shall be zero or at extremely low levels. Only in extremely panic or euphoric conditions, the scheme will move to mean reversion models and build equity exposure in bear markets or cut equity exposure in bull markets. Rebalancing based on the model shall happen on real time dynamic basis and will not follow a monthly/quarterly rebalancing model.

Disruption Strategy

The SAMCO Special Opportunities Fund focuses on generating long-term capital growth by investing in companies experiencing or poised for special situations. These include circumstances like technological disruption, regulatory changes, management restructuring, or prolonged cyclical challenges. The fund targets companies that are either disruptors, enablers, or adaptors of change, as well as those with significant turnaround potential. It leverages inefficiencies in financial markets where the impact of such special situations may be undervalued or overlooked, aiming to capitalize on the resulting mispricing or unanticipated growth potential. The fund's strategy encompasses a broad spectrum, including digitization, insider mirror trading, spin-offs, reforms, undervalued holding companies, premiumization, sustainable trends, innovation, organized shifts, and new or emerging sectors. This diversified approach seeks to exploit a range of growth opportunities across different sectors and market conditions.

Tactical Allocation Strategy

To achieve the investment objective, SAMCO Multi Cap Fund follow active investment strategy which employs a unique and balanced investment strategy designed to optimize returns across various market segments. The strategy is built around pre-dominantly allocating 25% each to large caps, mid-caps, small caps, and floating exposure to small caps/foreign securities/debt, ensuring diversified exposure to different market capitalizations. In scenarios such as a bear market, the fund may exercise tactical deviations from its equal weight strategy to safeguard investor capital and optimize returns.

Rotate Model Strategy

The principal asset allocation of Samco Multi Asset Allocation Fund shall be determined based on trends in equity markets and trends in prices of Gold, Silver based on SAMCO's proprietary ROTATE model. Trends in equity, commodity markets and extreme mean reversion signals which shall be calculated using SAMCO's proprietary ROTATE model. Fundamentally the scheme will operate based on trend following strategies i.e., when markets are in clear uptrends with lower volatility, equity allocations shall be higher and when markets are breaking down, in correction or bear market phases, net equity allocations shall be zero using hedging strategies or at extremely low levels. In such cases, if Gold, Silver as an asset is up trending and exhibiting inverse co-relation to equities, then in such cases, the Fund shall have pre-dominantly higher exposure to Gold, Silver which could go up to 80% of net assets. In cases when both Gold, Silver and Equities are trending down and exhibiting weakness, the Fund will have pre-dominantly higher exposure to debt. Rebalancing based on the model shall happen on real time dynamic basis and will not follow a monthly/quarterly rebalancing model.

Samco Active Momentum Fund

(An open-ended equity scheme following momentum theme)

Investment Objective

The investment objective of the Scheme is to seek to generate long-term capital appreciation by investing in stocks showing strong momentum. Momentum stocks are such that exhibit positive price momentum – based on the phenomenon that stocks which have performed well in the past relative to other stocks (winners) continue to perform well in the future, and stocks that have performed relatively poorly (losers) continue to perform poorly. However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

Samco Active Momentum Fund

(An open-ended equity scheme following momentum theme)

Portfolio Comment for December 2024

The month of December 2024 was marked by indecisiveness with divergence in the movement of headline indices and the broader markets. The headline index Nifty was down for the month despite rising for initial few days. The Smallcap and Midcap indices indicated indecisive closing though with less severe selling. The headline counters were relatively weaker as FIIs net sold in the month of December with majority selling assumed to be in the headline indices. The FIIs indeed participated in the primary markets however the indices might not fairly represent the inflows.

The Reserve Bank of India's decision to maintain an unchanged stance on interest rate reflected a careful balance between addressing inflationary pressures and supporting economic growth. During the commentary the government highlighted weakness in the economic growth and mildly downward revised the growth targets for this fiscal year. Moreover, the governor highlighted sticky inflation as one of the key reasons of this monetary stance. The new term of US President Donald Trump is expected to bring drastic changes in the geopolitical world and the new initiatives such as tariffs are bound to be inflationary. This kind of economic environment which is showing some signs of slowing down growth and persistent inflation requires cautious watching. In event of any sharp slowdown and revision in earnings estimates could prove detrimental to the markets. The proprietary models backing your fund allow the portfolio to be both aligned with stocks exhibiting momentum and remain hedged as the momentum in the markets deteriorate. This agile nature of the fund ensures that the portfolio strikes a perfect balance between risk and reward.

As of December 31, 2024, we have gross equity exposure of 96.46%, with the remaining 3.54% allocated to TREPS, Cash, Cash Equivalents, and Net Current Assets.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Disclaimer :

We are voluntarily disclosing the Active Share of Samco Active Momentum Fund in the interest of maintaining high transparency to the investors.

Please refer to our website www.samcomf.com/active-share/samco-active-momentum-fund to view how to calculate active share.

The information on Active Share should not be construed as a forecast or promise of returns or safeguard of capital. The Investors who must make their own investment decisions, based on their own investment objectives, financial positions and needs of specific investor.

Samco Dynamic Asset Allocation Fund

(An open-ended dynamic asset allocation fund)

Investment Objective

The investment objective of the Scheme is to generate income/long-term capital appreciation by investing in equity, equity derivatives, fixed income instruments and foreign securities. The allocation between equity instruments and fixed income will be managed dynamically so as to provide investors with long term capital appreciation while managing downside risk. However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

Portfolio Comment for December 2024

The month of December 2024 indicated a general weakness and indecisive behaviour across market segments. The broader index Nifty witnessed weakness and closed down for the month. The Midcap and Smallcap indices closed largely flat after struggling to sustain at higher levels in the initial days of the month. The interesting facet during the month was the net selling of FII's which was a combination of liquidation in secondary markets and active participation in the primary markets.

The RBI governor's commentary posts the MPC meeting indicated towards sticky inflation and slowing down growth in the economy. Moreover, the initial commentary of newly elected US President Mr. Donald Trump focused on imposing tariffs to many trade counterparts including major partners like China. This stance coupled with inward looking geopolitical narrative in the developed world could prove to be inflationary. The combination of slowing growth and persistent inflation if not reversed could prove to be detrimental for the markets. The TRANSFORMER Model backing your fund provides flexibility to stay invested in the markets during times of strength and momentum while transforming it into debt/arbitrage mode during the periods of downturn. This allows the portfolio to benefit from the periods of uptrend by ensuring downside protection risk.

As of December 31, 2024, we have gross equity exposure of 84.74%, net equity exposure of 40.66% of net assets in Indian Equities, 5.80% in debt instruments and the remaining 53.54% allocated to TREPS, Cash, Cash Equivalents, and Net Current Assets.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

The calculation of active share for DAAF has been done for only the equity segment vis a vis Nifty 500

Samco Flexi Cap Fund

(An open-ended dynamic equity scheme investing across large cap, mid cap, small cap stocks)

Portfolio Comment for December 2024

The month of December 2024 was marked by an overall sluggishness in the markets with divergence across frontline stocks versus the broader markets. The headline Nifty 50 witnessed selling pressure presumably backed by the selling by the FIIs in the secondary markets. The Nifty Midcap 150 and Nifty Smallcap 250 indices remained flattish on a monthly basis indicating relative outperformance and buoyancy. The datapoints showcased participation from foreign institutions in the primary markets indicating broadening of the investible universe for the outsiders. During these mixed times, a bottom-up approach focusing on fundamentally sound, high-growth companies would be a disciplined way of managing the portfolio.

Samco Flexi Cap Fund continues to prioritize investments in high-quality companies with robust fundamentals, superior growth prospects, and strong return ratios. In December, sectors such as Capital Markets, IT – Software and Pharmaceuticals & Biotechnology commanded the top weights as these demonstrated continued relative strength compared to other themes during the month. We remain vigilant in monitoring portfolio performance and are prepared to make any adjustments should market conditions change further.

As of December 31, 2024, we have deployed 90.97% of net assets in Indian Equities, with the remaining 9.03% allocated to TREPS, Cash, Cash Equivalents, and Net Current Assets.

Disclosure on Active Share

Samco Multi Cap Fund

(An open-ended scheme investing across large cap, midcap and small cap stocks)

Industry Allocation of Equity Holding (% of Net Assets)

Portfolio Comment for December 2024

The month of December 2024 was indicative of indecisiveness in the markets with the frontline index Nifty 50 facing weakness while the Midcap and Smallcap indices remaining flat though lower from their monthly high levels. The Indian economy is undergoing an interesting phase with sticky inflation and some slowdown in terms of growth. The geopolitical interactions between major economies are also indicative of an inflationary world going forward. Despite the fact, there are wide array of opportunities available in the market. The economy is shifting towards a phase where we are witnessing an investment lead growth rather than consumption led growth in the medium term. The fund is focused on creating a balanced portfolio across market segments which enables to create a right mix of franchises across their growth cycle. The trend following nature of the strategy allows to capitalize on different opportunities which are in trend and allows the portfolio to efficiently ride the winners in the markets while dropping the losers as and when the model indicates of weakness. This strategy allows to generate returns by capitalizing on companies which are beyond the top five hundred companies thus going more deeper and identifying new opportunities which are untapped and overlooked. The strategy focuses on striking the right balance between risk and reward providing sustained returns over the longer term.

As of December 31, 2024, we have gross equity exposure of 65.01%, net equity exposure of 56.09% of net assets in Indian Equities, 6.94% in debt instruments and the remaining 36.97% allocated to TREPS, Cash, Cash Equivalents, and Net Current Assets.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

Samco Special Opportunities Fund

(An open-ended equity scheme following special situations theme)

Investment Objective

The investment objective of the scheme is to achieve long-term capital appreciation by investing in a portfolio of securities that are involved in special situations such as restructurings, turnarounds, spin-offs, mergers & acquisitions, new trends, new & emerging sectors, digitization, premiumization, and other special corporate actions. These situations often create mispricings and undervalued opportunities that the fund aims to exploit for potential capital appreciation. However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

Portfolio Comment for December 2024

During the month of December, the markets witnessed indecisive behaviour with the broader markets composing of Mid and Small caps closing flat despite some initial bump during the start of the month. The headline index Nifty closed negative on a month on month basis due to selling pressure during the month. One of the prominent reasons for this weakness in the frontline counters is the FII selling which has been witnessed during the month. However, an interesting data point for the highlight for the month that the FIIs though being harsh sellers in the secondary markets have actively participated in the primary markets. This is indicative of a broadening of participation by foreign investors which might not be truly represented in the indices. We have re-iterated the fact that the winners of the tomorrow would meaningfully defer from the winners of the past. The Indian equity market has proved to be a breeding ground of new opportunities. The wide array of opportunities both in the primary and secondary markets provide an investor an opportunity to craft a balanced portfolio composed of diverse themes which could potentially become big as the economy undergoes through different phases of development. Your fund backed by the proprietary DISRUPTION strategy ensures a unique portfolio of special opportunities spread across a wide range of sectors and themes which are poised to grow in the future.

As of December 31, 2024, we have deployed 92.52% of net assets in Indian Equities, with the remaining 7.48% allocated to TREPS, Cash, Cash Equivalents, and Net Current Assets.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

*The calculation of active share henceforth will be on free float market capitalization, a change from full market capitalization.

Disclaimer :

We are voluntarily disclosing the Active Share of Samco Special Opportunities Fund in the interest of maintaining high transparency to the investors.

Samco ELSS Tax Saver Fund

(An open-ended Equity Linked Saving Scheme with a statutory lock-in of 3 years and tax benefit.)

Portfolio Comment for December 2024

The month of December was a mixed bag in terms of performance. The heavyweights of the market witnessed pressure primarily attributed to persistent selling by Foreign Institutional Investors in the secondary markets. While the large caps faced downward selling pressure, the Midcaps and Smallcaps were relatively stronger closing flattish on a month on month basis. One interesting facet observed in the market is the participation of foreign institutional investors in the primary markets which is a healthy sign of participation in a broadened universe by these institutions. As your fund is uniquely positioned by the virtue of investing predominantly in Midcaps and Smallcaps this is an encouraging sign indicating greater liquidity and participation in these market segments.

The fund is focused on curating a balanced portfolio of diverse set of companies which exhibit strong fundamentals and sound business performance. Our endeavour is to create a portfolio backed by emerging ideas which are poised to benefit from the strong economic tailwinds being witnessed by the Indian economy. By maintaining diversification across sectors, we ensure that risks are effectively managed, allowing the portfolio to remain resilient during periods of volatility.

As of December 31, 2024, we have deployed 92.24% of net assets in Indian Equities, with the remaining 7.76% allocated to TREPS, Cash, Cash Equivalents, and Net Current Assets.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Samco Multi Asset Allocation Fund

(An open ended scheme investing in Equity, Fixed Income, Exchange Traded Commodity Derivatives / Units of Gold ETFs / Silver ETFs & units of REITs/InvITs)

Portfolio Comment for December 2024

Samco Multi Asset Allocation Fund has witnessed an overwhelming response and support from unitholders and partners alike and has managed to garner around Rs. 173 Crs. Since the closure of New Fund Offer, the scheme is undergoing the portfolio construction process. Asset classes naturally evolve through distinct market cycles driven by macroeconomic forces and market sentiment shifts. Adopting a multi-asset strategy allows investors to navigate these cycles more effectively, delivering equity-like returns with reduced volatility.

Samco Multi Asset Allocation Fund leverages its trend following ROTATE model to dynamically adjust allocations across asset classes based on prevailing trends. This disciplined, data-driven approach ensures timely shifts that mitigate downside risk while optimizing potential returns, offering a more resilient and smoother investment journey. The data driven approach of the fund emphasizes on equity exposure in the portfolio in trending market and switching to Gold/Silver in case of down trending equity markets. Moreover, the fund's flexible structure enables it to transition into debt/arbitrage mode, which is designed to safeguard against downside risk. This strategy seeks to minimize drawdowns compared to a 100% equity or gold/silver portfolio, especially during rare periods when both equities and precious metals are in a downtrend. Thus, this approach focuses on proactively adjusting the portfolio weight across asset classes based on prevailing market trends improving overall portfolio stability by protecting downside during weak market scenarios while capitalising on trending market phases.

As of December 31, 2024, we have deployed 19.90% of net assets in Indian Equities, 25.81% is Gold, 14.42% in Government Securities, with the remaining 39.87% allocated to TREPS, Cash, Cash Equivalents, and Net Current Assets.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled "How active is your Fund Manager"- A New Measure That Predicts Performance.
