

# Factsheet

October 2024

# How to Read Factsheet

**Fund Manager:** An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He/She is usually part of a larger team of fund managers and research analysts.

**Application Amount for Fresh Subscription:** This is the minimum investment amount for a new investor in a mutual fund scheme.

**Minimum Additional Amount** : This is the minimum investment amount for an existing investor in a mutual fund scheme.

**SIP:** Systematic Investment Plan (SIP) works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for a SIP that invests ₹500 on every 15th of a month in an equity fund for a period of three years.

**NAV:** The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which an investor enters or exits the mutual fund.

**Benchmark:** A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds. Some typical benchmarks include the NIFTY, Sensex, BSE200, NSE500, Crisil Liquid Fund Index and 10-Year Gsec.

**Entry Load:** A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged when an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹100 and the entry load is 1%, the investor will enter the fund at ₹101.

**Note:** SEBI, vide para 10.4 of SEBI Master circular No. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90 dated June 27, 2024 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

**Exit Load:** Exit load is charged when an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceeds at net value of NAV less Exit Load. For instance, if the NAV is ₹100 and the exit load is 1%, the investor will receive ₹99 per unit.

**Modified Duration:** Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

**Average Maturity:** The average time of maturity of all the debt securities held in a portfolio. It states the weighted average maturity of the assets in the portfolio.

**Yield to Maturity (YTM):** The Yield to Maturity or the YTM is the rate of return anticipated on a bond is held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

**Standard Deviation:** Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

**Macaulay duration** : The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price

**Sharpe Ratio:** The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

**Beta Ratio (Portfolio Beta):** Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

**AUM:** AUM or assets under management refers to the recent/ updated cumulative market value of investments managed by a mutual fund or any investment firm.

**Holdings:** The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

**Nature of Scheme:** The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is termed an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

**Rating Profile:** Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

**Total Expense Ratio:** Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

**Portfolio Turnover Ratio:** Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

# About Strategy

## HEXASHIELD TESTED INVESTMENTS

HexaShield Tested Investments is a strategy to put to work money with businesses that can endure and survive in a variety of stressful situations and generate superior long-term risk adjusted returns. It relies on understanding the resilience of companies based on Samco-s HexaShield framework tests and evaluates every company and institution on 6 most important facets of risks and stress. These tests are meant to measure every company-s ability to maintain enough buffer to stay afloat under adverse economic scenarios. The HexaShield tests are also designed to understand if these companies can generate high cash returns on capital employed in a variety of economic conditions including degrowth, recession, etc. This rigorous scientific and statistical process helps get an understanding of risks, reduces room for bias and beliefs, inculcates discipline and enhances the probability of success.

### 3E Investment Strategy

1. Buy only [Efficient HexaShield Tested Companies](#)
2. Buy at an [Efficient Price](#)
3. Maintain an [Efficient Turnover](#)

## DISTINCTIVE PATTERN STRATEGY

Distinctive Pattern Strategies focus dynamic changes in the portfolio based on unique patterns, market trends, and special opportunities to generate returns. Momentum investing buys securities that have recently outperformed and sells those that have underperformed, based on the belief that recent trends will continue. Trend following aims to profit from long-term price trends by identifying established trends using technical indicators like moving averages. Event-driven investing focuses on taking advantage of specific corporate events such as mergers and restructurings, seeking to profit from the mispricing of securities around such events. Quantitative investing uses mathematical models and algorithms to identify and exploit market inefficiencies across market capitalization segments, sectors and themes.

**Momentum Strategy -** Momentum refers to the tendency of winning stocks to continue to perform well and losing stocks to perform poorly in the near future. Stocks in Momentum could be selected via Time Series Momentum or Cross-sectional Momentum. Time-series momentum and Cross-sectional momentum are two distinct measures used to evaluate the performance of stocks

**TRANSFORMER Strategy -** TRANSFORMER strategy aids with asset allocation of the fund based on momentum in equity markets and extreme mean reversion signals which shall be calculated using SAMCO-s proprietary TRANSFORMER model. Fundamentally the strategy will operate based on trend following strategies i.e., when markets are in clear uptrends with lower volatility, equity allocations shall be higher and when markets are breaking down, in correction or bear market phases, net equity allocations shall be zero or at extremely low levels.

**DISRUPTION Strategy -** DISRUPTION strategy encompasses a broad spectrum of unique investment opportunities, including digitization, insider mirror trading, spin-offs, reforms, undervalued holding companies, premiumization, sustainable trends, innovation, organized shifts, and new or emerging sectors. This diversified approach seeks to exploit a range of growth opportunities across different sectors and market conditions.

**Tactical Allocation strategy -** To achieve the investment objective, SAMCO Multi Cap Fund follow active investment strategy which employs a unique and balanced investment strategy designed to optimize returns across various market segments. The strategy is built around pre-dominantly allocating 25% each to large caps, mid-caps, small caps, and floating exposure to small caps/foreign securities/debt, ensuring diversified exposure to different market capitalizations. In scenarios such as a bear market, the fund may exercise tactical deviations from its equal weight strategy to safeguard investor capital and optimize returns.

# Samco Active Momentum Fund

(An open-ended equity scheme following momentum theme)

## Portfolio Comment for October 2024

During the month of October, the markets reciprocated the bullish move in the month of September with a sharp bearish phase with a steep downturn across different market cap segments. The most hurt was the headline index Nifty 50 which witnessed a sharp selloff from the beginning of the month leaving the index with zero returns in the last few months due to the wild swings that were observed. The Nifty Midcap 150 index and Nifty Smallcap 250 index followed a similar trajectory. The interesting facet was the brunt which broader smallcap and midcaps stocks witnessed, the downfall was far sharper and deeper than what the indices were depicting.

On the global macro front, the Chinese liquidity injective and economy stimulative measures are keenly observed by the global market participants. The improvement in situation for the Chinese markets could hurt the Indian markets tactically in the near term as hot money might want to bank upon the new story unfolding. Moreover, the US Presidential elections would be driver of change for the global geo-political dynamics. In the Indian context, the combination of buoyant liquidity and expensive valuations might lead to a corrective phase for our markets. A shallow rally could be on the cards. In such situation, the nature of our fund allows the portfolio to actively invest across market segments and pockets where there is sustained momentum. In case of a corrective phase, the hedging mechanism ensures protection of downside risk for the investors. These are times where capital appreciation and preservation need to be balanced to ensure a sustainable growth. As the markets have taken some corrective stance, your fund has also reduced its net equity exposure to preserve the returns and also protect downside by participating less in the falling markets.

As of October 31, 2024, the fund has gross equity of 78.20%, net equities stand at 57.98% and remaining balance of 42.02% is TREPS, Cash, Cash Equivalents, and Net Current Assets.

## Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled 'How active is your Fund Manager- A New Measure That Predicts Performance'.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

# Samco Flexi Cap Fund

(An open-ended dynamic equity scheme investing across large cap, mid cap, small cap stocks)

## Portfolio Comment for October 2024

We have deployed 99.32% of our AUM in Indian Equities and 0.68% in TREPS, Cash, Cash Equivalents, and Net Current Assets as of October 31, 2024.

This month has dampened the rally, with broader indices undergoing some correction. The momentum, which had been on an upward trajectory for several months, has slowed. A period of mean reversion was anticipated, especially after such a strong rally. Markets tend to follow the law of averages, and this normalization helps balance excessive valuations. While the recent earnings season has been somewhat disappointing, there are still growth pockets, particularly among high-quality stocks.

Our FlexiCap Fund emphasizes on fundamentally strong companies with high growth and return ratios. By including robust companies in our portfolio and maintaining significant exposure to Pharmaceuticals and Biotechnology, Personal Products and IT Software sectors, we create a defensive stance that helps protect against downside risks.

Looking ahead, geo-political uncertainties such as the U.S. elections and Iran-Israel tensions may contribute to volatility. We are closely monitoring our portfolio and stand ready to take necessary actions if conditions worsen.

# Samco Dynamic Asset Allocation Fund

(An open-ended dynamic asset allocation fund)

## Portfolio Comment for October 2024

The Indian markets witnessed a sharp downturn in the month of October. The Nifty 50 Index observed a sharp fall since the start of the month. The Nifty Midcap 150 and Nifty Smallcap 250 indices also witnessed a steep down move. The broader markets saw steep breadth deterioration in this down move. The Global markets are witnessing changing dynamics due to the two major economies going through different transitory periods. The US presidential elections and the Chinese economy revival initiatives are going to be key monitorable progressions which could have a longer term effect on the world. The Indian Market has remained resilient despite different adversities like wars, geo-political tensions, inflation and regime structure change. This is backed by solid domestic inflows and fundamentals of the economy.

However, the markets are bound to go through a corrective phase if the expectations baked into the valuations don't materialize which could lead to volatility. In such evolving times, the nature of your fund allows the portfolio to dynamically shift from equity to debt / arbitrage and vice versa leading to strong upside capturing and lower downside risk. Moreover, the TRANSFORMER Model is inherently a momentum seeking system which allocates capital to the areas of the market exhibiting strength on a sustained basis leading to return generation with a diverse portfolio and lowered volatility. We are constantly monitoring the evolving market dynamics, with risk management being our top priority for the portfolio.

As of October 31, 2024, the fund has gross equity of 80.98%, net equities stand at 33.07%, 5.88% in fixed income instruments and remaining balance of 61.05% is TREPS, Cash, Cash Equivalents, and Net Current Assets.

# Samco Multi Cap Fund

(An open-ended scheme investing across large cap, midcap and small cap stocks)

## Portfolio Comment for October 2024

The Samco Multicap Fund has witnessed an overwhelming response and support from unitholders and partners alike and has managed to garner around **349.79 crores** . Since the closure of NFO, the scheme is undergoing the portfolio construction phase. The strategy is aimed at deploying capital across market segments to ensure a balanced portfolio with stable risk return profile. The trend following nature of the strategy helps the portfolio to align with the pockets of the market exhibiting relative and absolute superiority. Moreover, the flexible hedging and arbitrage mechanism would ensure that the portfolio-s downside risk is protected and steady returns through debt/ arbitrage accrue during weak market scenarios. The markets are evolving very rapidly with shortening of economic cycles. Thus, an agile portfolio is the need of the hour versus traditional static portfolios. We intend to be flexible and open to change based on the signals that market throws in the future.

As of October 31, 2024, the fund-s portfolio comprised 43.09% in net equities and the remaining 56.91% in TREPS, cash, cash equivalents, and net current assets.

## Disclosure on Active Share

(An open-ended equity scheme following special situations theme)

Investment Objective		Portfolio as on October 31, 2024	
<p>The investment objective of the scheme is to achieve long-term capital appreciation by investing in a portfolio of securities that are involved in special situations such as restructurings, turnarounds, spin-offs, mergers &amp; acquisitions, new trends, new &amp; emerging sectors, digitization, premiumization, and other special corporate actions. These situations often create mispricings and undervalued opportunities that the fund aims to exploit for potential capital appreciation. However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.</p>

# Samco Special Opportunities Fund

(An open-ended equity scheme following special situations theme)

## Portfolio Comment for October 2024

The Indian markets are undergoing exciting times with induction of new set of companies and Industries entering the equity markets by the way of Initial Public Offerings. The strong domestic inflows have encouraged promoters from a diverse set of industries to go public and capitalize on the capital available in the markets for growing their business. We have re-iterated the fact at multiple instances that the winners of tomorrow will be significantly different from the past. Empirical evidence shows that the sectors heavily represented in the headline indices have undergone significant changes in the past based on the evolution of the economy. The last four years of the bull run have also been a testament to the fact that majority of the action has happened outside the headline indices backed by strong turnaround in broader market companies which were under owned and underrepresented in the indices.

The Indian economy is poised to grow with emerging sectors like Defense, Engineering, Renewables, Contract Manufacturing and other market pockets growing into larger parts over the years. The Government's focus on revival of distressed assets and companies will lead to efficiencies and turnarounds which will create significant wealth for shareholders. However, it is important to be cognizant of the fact that the ride is going to be lumpy to reach a beautiful outcome. The DISRUPTION model would ensure that a portfolio is composed with a diversified set of different market opportunities thereby managing risk effectively. As the markets keep on evolving, we would prioritize risk mitigation as one of the primary goals to ensure a sustained wealth creation for our investors.

As of October 31, 2024, we have deployed 98.85% of net assets in Indian Equities, with the remaining 1.15% allocated to TREPS, Cash, Cash Equivalents, and Net Current Assets.

## Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper titled 'How active is your Fund Manager'- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

Active  
**95.96** %

As on October 31, 2024

\*The calculation of active share henceforth will be on free float market capitalization, a change from full market capitalization.

### Disclaimer :

# Samco ELSS Tax Saver Fund

(An open-ended Equity Linked Saving Scheme with a statutory lock-in of 3 years and tax benefit.)

## Portfolio Comment for October 2024

We have deployed 99.78% of our AUM in Indian Equities and 0.22% in TREPS, Cash, Cash Equivalents and Net Current Asset as of October 31, 2024.

Broader markets came under pressure this month after a sustained rally that began in April of last year. Mid and small-cap stocks reached impressive highs, so a healthy correction this month was not unexpected. Markets tend to experience phases of mean reversion following significant movements, especially when valuations in certain stocks reach extreme levels.

With our fund, we continue to focus on quality stocks that have not yet hit valuation extremes or still offer growth potential relative to their valuations. Diversified exposure across various industries also helps protect against downside risk. To capitalize on India's growth story, we aim to leverage our investments in quality mid- and small-sized companies.
