## Frequently Asked Questions ([Link](#))

### 1. What are the charges associated with investing?

Zerodha Fund House funds will only have Direct Plans so there are no transaction charges associated with investment in Zerodha Fund House funds from any platform.

**Expense Ratio:** For managing the fund, AMC will charge an expense ratio which will vary for each fund. These expenses include but are not limited to fees charged by the AMC, Registrar and Transfer Agent's fee, Custodian fee, etc. Investor's return on investments shall be post deducting the applicable expenses.

**Stamp Duty:** As per the government regulations in the Finance Act, 2019 - Stamp Duty will be levied @0.005% on the value of units purchased. The stamp duty will be deducted from the net investment amount.

For instance: If the transaction amount is ₹1,00,000 /-, the stamp duty of ₹5 will be deducted. If the applicable Net Asset Value (NAV) is ₹10 per unit, then units allotted will be calculated as follows: (Transaction Amount - Stamp Duty)/ Applicable NAV = 9,999.50 units)

### 2. Is there any lock-in period to invest in these funds?

Zerodha Fund House funds will not have any Lockin period except the Zerodha ELSS Tax Saver Nifty LargeMidcap 250 Index Fund, where to provide the tax benefits under Section 80C of the Income-tax Act, 1961, the three-year lock-in period is mandatory.

# HOW TO READ FACTSHEET

## Fund Manager

A Fund Manager is an employee of the asset management company who is responsible for managing investments of the scheme.

## SIP

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs 500 every 15th of the month in an equity fund for a period of three years.

## NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

## Benchmark

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the NIFTY, SENSEX, BSE200, BSE500.

## Exit Load

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceed at net value of NAV less Exit Load. For instance if the NAV is Rs. 100 and the exit load is 1%, the investor will receive Rs. 99.

## Portfolio Turnover Ratio

Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

## AUM

AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

## Holdings

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

## Expense Ratio

Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

## Tracking Error

Tracking error indicates how closely the portfolio return is tracking the benchmark Index return. A lower tracking error indicates portfolio closely tracking benchmark index and higher tracking error indicates portfolio returns with higher deviation from benchmark index returns.

## Standard deviation

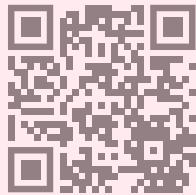

Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

## Sharpe Ratio

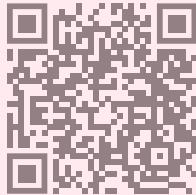

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
