Source: RBI, Bloomberg

Inflation: India's Wholesale Price Inflation (WPI) Index came in at 2.36% YoY during the current month as compared to 1.84% for the previous month on account of stable fuel, higher food and lower commodity prices.

Headline CPI inflation for October spiked to 6.21% YoY, primarily due to sequential rise in food inflation (2.6% MoM), particularly in vegetables, with oils & fats, eggs, cereals, and fruits seeing significant momentum. Core inflation also moved higher to 3.8% YoY, mainly due to sustained gold price momentum. November CPI is tracking ~5.4-5.5% with some pullback in food prices so far. Select economists expect core inflation averaging ~3.6% in FY25E and remaining below 4% till end-CY24, FY25 headline inflation is now estimated at ~4.9%, slightly higher than the RBI's forecast of 4.5%.

India's real GDP (at market prices) grew by 5.4% YoY in the September-24 quarter (Q2FY25) and by 6.7% YoY in Q1FY25. FY24 GDP growth stood at 8.2% ahead of the estimated 7.6% for the year. Capital formation growth stood at 5.9% for Q2FY25 and 9% for the full year FY24. Going forward, consensus estimates have been brought down towards a range between growth of 6.0%-6.5% GDP growth for FY25.

Other macro developments (fiscal deficit and household savings)

India's Q1FY25 current account balance registered a deficit of US\$9.7bn (1.1 of GDP) compared to a surplus of US\$ 6bn (0.6% of GDP) for Q4FY24. The deficit represents higher gold imports which are likely to normalise going ahead. India's fiscal deficit came much lower than forecasted at 5.6% for FY24 on account of lower revenue expenditure. The government has announced a path to reduce fiscal deficit to 4.9% for FY25 (revised lower from 5.1% earlier) and below 4.5% in FY26.

FY23 net household financial savings rate stood at 5.1% of GDP (7.2% for FY22). The same ratio had moved higher during the pandemic period to 12% in FY21 compared to 7.7% in FY20.

Market Outlook

Our monthly outlook for previous month ie October 2024 talked of corporate earnings being on the weaker side on the back of government capital expenditure being down by 15% for the 1HFY25 compared to 1HFY24 due to general elections along with strong monsoon and effects of past tight monetary policy.

Q2FY25 GDP growth came to 5.4%, lower than economists estimates of >6%. Media and various economists are highlighting that growth is lower and both the government and the RBI need to boost growth through capex pickup and a dovish monetary policy, specially liquidity. We are of the opinion that government capital expenditure is likely to pick up quite well in the 2HFY25 leading to better economic growth for the full year. Infact, as per latest fiscal deficit data released, the Central government has preponed transfer of US\$9.5bn to state governments in order to make capital available to boost capex. This amount will be adjusted by end of the year. This is a very good move and highlights the intent of the government to balance growth for the year.

We in our portfolios are focused on companies which can grow earnings at a fast pace and most importantly balance sheets/cash flow being on the positive side with less leverage.

Long-term structural drivers like demographic advantage, low household debt, limited penetration across different consumer categories, increased potential for financial savings and urbanization makes India a compelling equity story from medium to long term perspective.

We believe investors would be well advised to invest with medium to long term perspective and systematically increase exposure to Indian equity markets.

Government Securities rallied on the last day due to India's second quarter GDP growth coming at 5.4 percent against market expectation of 6.5 percent. RBI projection for the second quarter GDP growth was 7 percent. The market was volatile due to October CPI inflation coming at 6.21 percent. US yields moving higher due to incumbent US president Donald Trump tax cut proposal which could lead to higher fiscal deficit and imposition of tariffs which will lead to higher inflation in US. The Federal terminal rate cut which was in the 3.25 to 3.50 band has moved to 3.75 to 4 percent band.

The US Dollar strengthened due to the expected tariff increase by the US and expectation of lower fiscal deficits with the appointment of Scott Bressent as new treasury secretary. Scott Bressent has stated he will bring the fiscal deficit to 3 percent from 6 percent prevailing at present by 2026. This is positive for the dollar. The Chinese currency yuan depreciated against the dollar due to expectation of 60 percent increase in tariffs on Chinese goods coming into US. Trump has also indicated he will go for twenty-five tariffs against goods imported from Mexico and Canada. The Chinese yuan has depreciated by 2.7 percent against the dollar and Indian currency depreciation of 0.7 percent. The emerging market dollar index has fallen by 2.5 percent after Trump victory.

Liquidity in the banking system has fallen from Rs 4 Lakh crores surplus to Rs 1 lakh crores at present. This is due to currency leakage and RBI selling dollars in the spot and forward market to smoothen the currency depreciation. Liquidity is expected to remain tight in the second half of the fiscal year, even after a CRR cut of Rs 1.16 Lakh crores. This is due to RBI forward sales of USD 20 Billion and expected currency leakage as economic activity picks up in the festive season.

Debt markets were volatile during the month with the ten-year touching 6.86 levels due to higher October CPI inflation of 6.21 percent. Higher food inflation accounted for 74 percent of the rise, even though the weightage for food is 46 percent in the CPI inflation index. CPI Inflation for the month of November is expected at 5.50 to 5.70 percent. December month CPI inflation is expected to be around 5 percent as rabi crop harvest starts coming into the market. Currency weakness led to FII selling in debt market in the month of November from the Fully Accessible Route (FAR) to the extent of Rs 4300 Crores. Market players created short positions as they pushed back rate cuts to April meeting and expected hawkish comments from RBI in the monetary policy on 6th December 2024.

The second quarter GDP number came at 5.4 percent against market expectation of 6.5 percent. Weakness was reflected in mining and manufacturing sectors and urban consumption demand has weakened in line with management commentary of companies. Private investment is showing a slump with only Government spending and rural demand boosting demand. The first quarter GDP now stands at 6.05 percent. RBI has revised its third and fourth quarter GDP to 6.8 and 7.2 percent and the full year GDP growth to 6.6 percent. CPI inflation for the full year has been revised to 4.8 percent, with the fourth quarter inflation at 4.7 percent. The GDP growth for the second quarter is 8 percent and the first half nominal GDP growth is 8.9 percent. The government while presenting the current year budget has factored nominal GDP growth of 10.5 percent.

RBI in its monetary policy stance has kept rates unchanged but cut the CRR by fifty basis points. The RBI governor has stated the effect of rate cuts should have maximum impact and not be wasted. With liquidity being tight, the priority was to loosen liquidity and subsequently as CPI inflation comes towards target rate, RBI could start prioritizing growth over CPI inflation. We are now in an adverse mix situation with growth slowing down and inflation moving up, this could change in the last quarter. We should expect rate cuts to start from February onwards as CPI inflation moves towards the 4 percent level. Investors should invest in duration products to take advantage of rate cuts and high accruals prevailing at present.

\$-ICRA's mutual fund rating methodology is based on evaluating the inherent credit quality of the fund's portfolio. As a measure of the credit quality of a debt fund's assets, ICRA uses the concept of 'credit scores'. These scores are based on ICRA's estimates of credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories for various maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio still continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality.

HOW TO READ A FACT SHEET

SCHEDULE 3

Fund Manager: An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription: This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount: This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity: The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP: SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs 500 every 15th of the month in an equity fund for a period of three years.

NAV: The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark: A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.

Entry Load: A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent.

Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1%, the investor will enter the fund at Rs 101.

Exit Load: Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceeds at net value of NAV less Exit Load. For instance, if the NAV is Rs 100 and the exit load is 1%, the investor will receive Rs 99.

Modified Duration: Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Standard Deviation: Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio: The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta: Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM: AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings: The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme: The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile: Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

R-Squared: R-squared measures the relationship between a portfolio and its benchmark. It is simply a measure of the correlation of the portfolio's returns to the benchmark's returns.

Treynor Ratio: Treynor Ratio is a measurement of efficiency utilizing the relationship between annualized risk-adjusted return and risk. Unlike Sharpe Ratio, Treynor Ratio utilizes "market" risk (beta) instead of total risk (standard deviation).

Jensen Alpha: A measure of the difference between a fund's actual returns and its expected performance, given its level of risk as measured by beta. Jensen's Alpha is equivalent to the alpha derived from regressing the same or portfolio's returns in excess of the risk free rate against the market return in excess of the risk free rate.
