Market Update

January 31, 2025

Equity Market Update

- India's Services Purchasing Managers' Index (PMI) increased to 59.3 points in December 2024, up from 58.4 points in November 2024, indicating expansion in the country's services sector.
- India's manufacturing activity saw its slowest growth of 2024 in December, with the Manufacturing Purchasing Managers' Index (PMI) dropping to 56.4 from 56.5 in November 2024. The data pointed to weaker demand in the sector, despite reduced cost pressures and robust job growth.
- India's retail inflation, measured by the Consumer Price Index (CPI), was 5.22% in December 2024, a slight decrease

from 5.48% seen November 2024. This reduction was mainly attributed to a slowdown in the rise of food prices, especially for vegetables, cereals, and pulses.

- Wholesale Price Index (WPI) inflation increased to 2.37% in December 2024, up from 1.89% in November. The rise was primarily driven by higher prices for food articles and the production of food products.
- Goods and Services Tax (GST) collections in January totalled ₹ 1.96 lakh crore, marking a 12.3% year-on-year growth.
- Indian equity indices experienced a slight dip due to global events, with the Nifty and Sensex registering month-on-month declines of 0.58% and 0.82%, respectively.

Market Update

January 31, 2025

Debt Market Update

- Consumer Price Index (CPI) inflation eased to 5.2% in December 2024 from 5.5% in November 2024, though it remained above the 5% mark for the fourth consecutive month. The decline was largely attributed to lower food prices, particularly in vegetables, key staples, and pulses. With inflation showing signs of moderation and economic growth slowing, attention is now on the RBI's stance on potential rate cuts.
- WPI inflation increased to 2.37% year-on-year in December 2024 from 1.89% in November 2024. The rise was driven by costlier primary articles and manufactured goods. Food prices played a significant role, climbing 8.89% in December, with vegetable prices surging 28.65% and pulses registering a 5.02% increase.
- Industrial production (IIP) saw a notable increase in November 2024, reaching a six-month peak of 5.2%, up from 3.7% in October. Growth was fueled by a robust manufacturing sector (5.8%), along with steady expansions in mining (1.9%) and electricity (4.4%). The core sector grew by 4.3%, with infrastructure goods output hitting a 13-month high of 10%, supported by higher government spending. Consumer durables recorded the highest growth at 13.1%, whereas non-durables saw a modest rise of 0.6%. The increase was largely driven by festive demand and a favourable base effect, although overall momentum remained subdued, as sequential industrial production declined by 1.2%.

Data as of January 2025, Source: Bloomberg (as on 31st January 2025)
Data as of November 2024

- Core industries experienced a 4% growth in December 2024, slightly lower than the 4.4% recorded in November 2024, continuing a four-month expansion streak. These key sectors, which make up 40% of the IIP, had played a role in pushing industrial output to a six-month peak of 5.2% in November. However, the deceleration in core sector growth raises economic concerns, especially as GDP has declined to a seven-quarter low of 5.4%.
- GST collections for January 2025 rose 12.3% year-on-year to Rs 1.96 lakh crore (Rs 1.76 lakh crore in December 2024). Year-to-date collections scaled to Rs 16.33 lakh crore, marking a 9.1% rise from the previous year but falling 18.98% short of the fiscal 2024 target.
- India's merchandise trade deficit contracted to USD 21.9bn in December 2024, a significant reduction from USD 37.8bn in November 2024. Export earnings touched USD 38.0bn, while imports stood at approximately USD 60bn. The trade ministry recently revised import figures for precious metals, such as gold, after an earlier miscalculation overstated imports between April and November by USD 5 billion. Consequently, the trade deficit for that period was adjusted downward by USD 13.6bn to USD 188.8bn. In December 2024, gold imports amounted to USD 4.7bn, while oil imports were valued at USD 15.2bn.
- The Union Budget 2026 sought to balance fiscal discipline with economic stimulation. Efforts to spur middle-class consumption included raising the tax exemption threshold while adjusting tax rates for higher income brackets. Additionally, key sectors such as agriculture and the gig economy received policy support. The government aims to lower the fiscal deficit to 4.4% of GDP in 2025-26, down from 4.8%, reflecting a commitment to financial stability.

India Yield Curve Shift (Year- on- Year)

Source: Thomson Reuters Eikon data as on January 31, 2025

10-Yr Benchmark Gsec Bond

Past performance may or may not be sustained in future and is not a guarantee of any future returns, and should not be used as a basis of comparison with other investments. Index performance does not signify scheme performance. Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Equity Market Outlook

India is undergoing remarkable growth in structural, cultural, and digital areas. With consumption accounting for 60% of its GDP and a solid balance sheet, the country looks well-positioned for sustained long-term growth. India's recognition as the "service capital" of the world further underscores its pivotal role in the global economy.

Looking ahead to February, both global and Indian equity may be shaped by a range of factors, including the December quarter results and the policies of the newly elected U.S. President. The Indian market stands to benefit from the 2025 Union Budget, which emphasizes strengthening consumption and supporting the manufacturing sector. These initiatives aim to create a more balanced and diverse economic landscape across various industries.

Geopolitical dynamics and the anticipated policies of the Trump administration may play a key role in shaping market trends in the months to come. The government's focus on capital expenditure (capex) and driving consumption in the Budget is expected to positively impact select sectors of the Indian economy, supporting broader economic growth and employment opportunities.

The push to enhance consumption is a welcomed step, although the flat capex target for infrastructure and core sector investments has prompted some discussion. While private sector participation was expected to complement public spending, a more cautious approach has been observed. Additionally, while earnings for the third quarter of FY26 have been slower, the evolving landscape of global tariff policies offers an opportunity for continued strategic adjustments. Overall, these factors contribute to a dynamic environment, providing multiple avenues for growth and opportunity in the Indian market.

Debt Market Outlook

Bond markets responded positively to the Union Budget, primarily due to the government's commitment to fiscal consolidation. The budget set a fiscal deficit target of 4.4% of GDP for FY26, down from the revised 4.8% for the current year. The narrower deficit target is expected to bolster investor confidence.

Bond markets anticipate that the RBI may adopt an accommodative stance in its upcoming monetary policy meeting, which coupled with the government's fiscal discipline, is expected to support lower bond yields.

Long-term investors can consider longer duration funds like Dynamic Bond Fund and Banking & PSU Fund, while short-term investors can look at ultra short and use Liquid Fund to park their excess cash.

CDMDF : Corporate Debt Market Development Fund

*With effect from February 01, 2025 Mr. Laukik Bagwe will also be managing the fund

Note:-

- The risk ratios are calculated as per the AMFI methodology prescribed for these ratios.
- The above table is a snapshot for quick understanding, it must be read with the Factsheet along with details of Riskometer for each scheme.
- Please consult your financial advisor before investing. For details, please refer to respective page of the scheme.
- Expense ratio includes GST, Base TER and additional expenses as per regulation 52 (6A) (b) and 52 (6A) (c) of SEBI (MF) regulations for both Direct and Regular plans
- The TER for the above funds are in the range of 0.18% to 1.20% in the case of regular plans and in the range of 0.08% to 0.15% in the case of direct plans.

Past performance may or may not be sustained in future and is not a guarantee of any future returns, and should not be used as a basis of comparison with other investments. Different Plans i.e. Regular Plan and Direct Plan under the scheme have different expense structure. Benchmark: Nifty 500 TRI Additional Benchmark: Nifty 50 TRI. For SIP returns, monthly investment of Rs.10,000 invested on the 1st business day of every month has been considered. CAGR Returns (%) are computed after accounting for the cash flow by using the XIRR method (investment internal rate of return).

For details of other Schemes managed by Fund Manager please refer to page no. 29 to 32.

Disclaimer - Fund SIP Performance

The performance details provided herein are of Growth option under Direct and Regular Plans. The Fund(s) offer Systematic Investment Plan (SIP) facility. To illustrate the advantages of SIP investments, this is how your investments would have grown if you had invested say Rs. 10,000 systematically on the first Business Day of every month over a period of time in the Growth Option of respective scheme. The returns are calculated by XIRR approach assuming investment of 10,000/- on the 1st working day of every month. XIRR helps in calculating return on investments given an initial and final value and a series of cash inflows and outflows with correct allowance for the time impact of the transactions.

(SIP) Returns

MUTUAL FUND INVESTMENTS ARE SUBJECT TO MARKET RISKS, READ ALL SCHEME RELATED DOCUMENTS CAREFULLY.

We would like to thank you for your trust in ITI Mutual Fund.

We encourage you to connect with us on our digital platforms.

We request you to submit transactions / requests by using various other modes i.e. AMC website (www.itiamc.com) / RTA website <http://mfs.kfintech.com/mfs/> / RTA Mobile app / MFU website / MFU mobile application or connect with your financial advisor.

If you have any further queries, our phone line is available to assist you between 9:00 a.m. to 6 p.m. from Monday to Saturday on 18002669603 (Toll free). Alternatively, you can also e-mail us at mfassist@itiorg.com. We would appreciate your patience while we work on your query and ready to provide satisfactory responses.

Thanking you, and assuring you of our best services always.

Glossary

- **Average Maturity:** Weighted average maturity of the securities in scheme.
- **Macaulay Duration (Duration):** Macaulay Duration (Duration) measures the price volatility of fixed income securities. It is often used in the comparison of interest rate risk between securities with different coupons and different maturities. It is defined as the weighted average time to cash flows of a bond where the weights are nothing but the present value of the cash flows themselves. It is expressed in years. The duration of a fixed income security is always shorter than its term to maturity, except in the case of zero-coupon securities where they are the same.
- **Growth and Cumulative option:** Growth and Cumulative words are used alternatively.
- **Risk ratio data:** There are few stocks which are having abnormal price to earnings multiple, because of the aberration (Covid-19) in the financial results (of the base year). We believe the price to book multiple is a better indicator of the business valuation especially in this kind of abnormal situations. Investors should ideally normalise these valuation multiples to have a better idea of the portfolio.
- **Portfolio Turnover Ratio:** Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given period. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing it by average monthly net assets.
- **Tracking Error:** Tracking error indicates how closely the portfolio return is tracking the benchmark index return. It measures the deviation between portfolio return and benchmark index return. A lower tracking error indicates portfolio is closely tracking benchmark index and higher tracking error indicates higher deviation of portfolio returns from benchmark index returns.
- **Risk Free Return:** The theoretical rate of return of an investment with safest (zero risk) investment in a country.
- **IDCW - IDCW** stands for 'Income Distribution cum Capital Withdrawal option'. The amounts can be distributed out of investors' capital (Equalization Reserve), which is part of the sale price that represents realized gains, as may be declared by the Trustees at its discretion from time to time (subject to the availability of distributable surplus as calculated in accordance with the Regulations).
- **Portfolio Yield (Yield To Maturity):** Weighted average yield of the securities in a scheme portfolio.
- **Total Expense Ratio (TER):** Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

How to read factsheet

- **Fund Manager:** An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.
- **Application Amount for Fresh Subscription:** This is the minimum investment amount for a new investor in a mutual fund scheme.
- **Minimum Additional Amount:** This is the minimum investment amount for an existing investor in a mutual fund scheme.
- **SIP:** SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for a SIP that invests Rs. 500 on every 15th of a month in an equity fund for a period of three years.
- **NAV:** The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which an investor enters or exits the mutual fund.
- **Benchmark:** A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds. Some typical benchmarks include the NIFTY, Sensex, BSE200, NSE500, Crisil Liquid Fund Index and 10-Year Gsec.
- **Entry Load:** A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged when an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1%, the investor will enter the fund at Rs. 101.
- (Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor).
- **Exit Load:** Exit load is charged when an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceeds at net value of NAV less Exit Load. For instance, if the NAV is Rs. 100 and the exit load is 1%, the investor will receive Rs. 99.
- **Yield to Maturity (YTM):** The Yield to Maturity or the YTM is the rate of return when a bond is held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.
- **Modified Duration:** Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.
- **Standard Deviation:** Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.
- **Sharpe Ratio:** The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
- **Beta:** Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
- **AUM:** AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.
- **Holdings:** The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.
- **Nature of Scheme:** The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is termed an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.
- **Rating Profile:** Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Invest in India's Growing Consumption Appetite

Introducing **ITI Bharat Consumption Fund**
